

Smart Supplement Light

Configuration > System > System Settings > metadata Settings

Metadata is the raw data the camera collects before algorithm processing. Metadata of intrusion detection, line crossing detection, region entrance detection, region exiting detection, unattended baggage detection, object removal, queue management and face capture can be uploaded. If enabled, the metadata of the corresponding event are available for users to explore the possibility of various data usage

Anti-banding is a feature on cameras that reduces the flicker effect caused by artificial lighting. When the frequency of the lighting (measured in hertz, or Hz) does not match the camera's shutter speed, it can cause banding or flickering in the resulting image or video footage.
