

Duplicate uploads issue

Scenario:

1. build project Docker image with tags `project:latest` and `project:my_feature`
2. push all tags of project with commands `docker push -s project`
3. 1st tag `latest` is pushed
 1. preparation of layers (compression, etc)
 2. pushing layers
4. 2nd tag `my_feature` is pushed
 1. preparation of layers (compression, etc)
 2. pushing layers
 3. server responds layer already exists

So duplicate layers are not stored server side, but still all of them are compressed and pushed which take long time.

Gilab's registry

`/opt/gitlab/embedded/bin/registry`

```
./registry --version  
./registry github.com/docker/distribution v3.76.0-gitlab
```

Config file: `/var/opt/gitlab/registry/config.yml`

During `docker push` registry store received layers in: `/var/opt/gitlab/gitlab-rails/shared/registry/docker/registry/v2/repositories/GROUP/PROJECTS/_uploads/4786e5fa-4e9b-4342-9c6f-3c80d72d07db/data`
