

Gitolite

Installation

```
DEBIAN_PRIORITY=low apt-get install gitolite3
```

- System username for gitolite: **git**
- Repository path: **/home/git/**
- Administrator's SSH key: **ssh-rsa ...**

lost admin key/access

Log on to the server, and run

```
gitolite setup -pk alice.pub
```

That's it; the new alice.pub file replaces whatever existed in the repo before.

Usage

Clone control repo:

```
git clone git@localhost:gitolite-admin
```

Adding users and repos

- add user keys `username.pub` into `keydir`
- edit `conf/gitolite.conf`

gitolite.conf

```
repo foo
    RW+      =  alice
    RW      =  bob
    R       =  carol
```

* commit changes

```
git add conf
git add keydir
git commit -m "added foo, gave access to alice, bob, carol"
git push
```

Push existing repos

```
git remote add origin git@localhost:mynewrepo
git push origin master --set-upstream
```
