SSH & Web Terminal

Debug SSH to host

Enable real SSH to host operating system:

- Install and configure [Terminal & SSH](#) Add-on to use public key
- use real host console
- login as root by issuing login command
- `cd /root/.ssh`
- make sure that [Terminal & SSH](#) Add-on public key exists:
 - `docker exec -it addon_core_ssh ls -la /data/.ssh`
- copy `authorized_keys` from addon to host:
 - `docker cp addon_core_ssh:/data/.ssh/authorized_keys .`
 - `chmod 600 authorized_keys`
- Start SSH server:
 - `systemctl enable --now dropbear`
- Login to host:
 - `ssh homeassistant -l root -p 22222`
