invalid primary checkpoint record

After unclean shutdown:

```
user=db,app=,client= LOG:  invalid primary checkpoint record
user=db,app=,client= PANIC:  could not locate a valid checkpoint record
```

Postgresql running from official docker container.

Solution:

Prevent container from restarting:

```
docker-compose stop db
```

`docker-compose.yml`

```
services:
  db:
    image: postgres:12-alpine
    command: bash
```

run it interactively:

```
docker-compose run db
```

and reset WAL:

```
su postgres -c '/usr/local/bin/pg_resetwal -f /var/lib/postgresql/data'
```
