

ZFS compression

```
zfs get compression
zfs get compression /rpool

zfs get compressratio
zfs get compressratio /rpool

zfs get
compression,compressratio,used,logicalused,referenced,logicalreferenced
rpool/data/subvol-118-disk-0
```

switch to ZSTD

From OpenZFS 2.0.0 there is support for ZSTD:

```
zpool get all | grep compr
nvmpool  feature@lz4_compress      active      local
nvmpool  feature@zstd_compress      disabled    local
rpool    feature@lz4_compress      active      local
rpool    feature@zstd_compress      disabled    local

zfs get all rpool | grep compr
rpool  compressratio      1.16x      -
rpool  compression         on          local
rpool  refcompressratio    1.00x      -
```

```
zfs set compression=zstd rpool/data
cannot set property for 'rpool/data': pool and or dataset must be upgraded
to set this property or value
```
