

zpool upgrade

Do not blindly upgrade boot volume when grub is used. Grub support limited set of zpool features! Or use systemd-boot and EFI partition.

```
~# zpool status nvmpool
```

```
status: Some supported features are not enabled on the pool. The pool can
       still be used, but some features are unavailable.
action: Enable all features using 'zpool upgrade'. Once this is done,
       the pool may no longer be accessible by software that does not support
       the features. See zpool-features(5) for details.
```

```
zpool upgrade -v
```

```
# zpool upgrade
```

This system supports ZFS pool feature flags.

All pools are formatted using feature flags.

Some supported features are not enabled on the following pools. Once a feature is enabled the pool may become incompatible with software that does not support the feature. See zpool-features(5) for details.

```
POOL  FEATURE
```

```
-----
```

```
nvmpool
```

```
redaction_bookmarks
redacted_datasets
bookmark_written
log_spacemap
livelist
device_rebuild
zstd_compress
```

Perform upgrade:

```
zpool upgrade nvmpool
```
