

Spamassassin

Issues

Problem:

```
info: auto-whitelist: sql-based get_addr_entry xxxxxx: SQL error: Unknown
column 'last_hit' in 'order clause'
```

Solution:

Configure reputation database (read /usr/share/doc/spamassassin/sql/README.txrep) for mysql, execute /usr/share/doc/spamassassin/sql/txrep_mysql.sql

Problem:

pts	rule name	description
0.0	URIBL_BLOCKED	ADMINISTRATOR NOTICE: The query to URIBL was blocked. See http://wiki.apache.org/spamassassin/DnsBlocklists#dnsbl-block for more information. [URIs: grinn-global.com]

There are lots of queries to google dns 8.8.8.8, but google responds with NXDomain or ServFail. The same single query works. Probably google blocks bursts of this kind of requests.

Solution:

local.cf

```
dns_server 127.0.0.1
```
