

```
local debuginfo = debug.getinfo (1)
local fnName = debug.getinfo (1, "n").name
```

- f - returns "func" field
- l - returns "currentline" field
- L - returns a table whose indices are the numbers of the lines that are valid on the function. (A valid line is a line with some associated code, that is, a line where you can put a break point. Non-valid lines include empty lines and comments.)
- n - returns "name" and "namewhat" fields
- S - returns "source", "short_src", "linedefined" and "what" fields
- u - returns "nups" field
