

issues

start by systemd hangs

```
ejabberdctl started  
su: Authentication failure
```

ejabberctl started is simply polling in loop ejabberctl status.

```
/bin/sh -x /usr/sbin/ejabberdctl status  
  
...  
su -s /bin/sh -c "$@" ejabberd -- /usr/bin/erl -sname ea7-ctl-  
ejabberd@spox1 +K true -smp auto +P 250000 -env ERL_CRASH_DUMP_BYTES 0 -  
hidden -noinput -s ejabberd_ctl -extra ejabberd@foo1 status
```

Take care what hostname is used for connection (ejabberd@foo1). With default configuration, host foo1 should be resolvable to IP from lo range.
