

# kconfig

## integrate in own project

### from source

- Separated kconfig:
  - <https://github.com/mcgrof/kconfig> or
  - <https://github.com/linux-kdevops/kconfig>
- And how to use it [Adapting Linux kernel kconfig](#)

### from package

apt-get install kconfig-frontends

### other resources

- [Kconfig for embedded applications](#)
- [Adding support for menuconfig / Kconfig in my project](#)

but I think it is overcomplicated. Too many files are copied from Kernel (KBuild is not needed), and too many changes are done so it is not updatable.
