No such file or directory
```

```
$ ./nextcloud --appimage-extract
$ cd squashfs-root
$ ./AppRun
```

```
linuxdeployqt (commit 9447f60), build 9 built on 2022-01-23 15:58:30 UTC
ERROR: The host system is too new.
Please run on a system with a glibc version no newer than what comes with
the oldest
currently still-supported mainstream distribution (Ubuntu Bionic), which is
glibc 2.27.
This is so that the resulting bundle will work on most still-supported Linux
distributions.
For more information, please see
https://github.com/probonopd/linuxdeployqt/issues/340
```

Solution for now: compile from git source

2023-01-01 Update: During startup of nextcloud dmesg prints:

```
[1734634.654842] NVRM: API mismatch: the client has the version 470.161.03,
but
Please
driver
NVRM: this kernel module has the version 470.141.03.
NVRM: make sure that this kernel module and all NVIDIA
NVRM: components have the same version.
```
