

Issue

nginx: [warn] protocol options redefined for 0.0.0.0:443

Nginx 1.23.4 introduces listen directive consistency check between all config files.

All `listen 443` directives must be with the same options. So example below shows incorrect configuration:

```
# in some files:
listen 443 ssl http2;

# in another:
listen 443 ssl;
```

So check every virtualhost config file and also `/nginx/conf.d/default.conf`
