

# Tips

- [Overwriting Yocto Classes through meta-layer](#)

## override .conf

No override or appends mechanism. But some workaround possible:

1. override variables in `local.conf`
2. create new conf file and inherit old one with `require`
3. create new conf file with the same name to mask old file (take care of layer priority)

## MACHINEOVERRIDES

When creating new machine.conf based on existing one [MACHINEOVERRIDES](#) can be used:

[machine-overrides-extender.bbclass](#)

## logging

```
inherit logging
```

```
bb.debug("HELLO = %s" % HELLO)
```
