

Replace node

New Proxmox node under the same hostname pve3 was installed.

- Remove old monitor `ceph mon remove pve3`
- On pve3 node:
 - Remove `mon.pve3` entry from `/etc/pve/ceph.conf`
 - Remove `mon_host = X.X.X.X` in section `global`
- From GUI Create CEPH monitor on pve3
- From GUI Create CEPH manager on pve3
- ??? set no in flag and create osd from GUI to propagate OSD keys. It got number i.e. 7.
 - Remove just created OSD: `pveceph destroy 7`
 - Remove old osd `pve ceph destroy 1`
 - If above not work, try `ceph osd destroy 1; ceph osd purge 1, etc`
- Create OSD again with DB partition: `ceph-volume lvm create --bluestore --data /dev/sdc --block.db /dev/nvme0n1p3`
