

# Influxdb2 and Grafana

Proxmox VE sends the data over UDP, so the influxdb server has to be configured for this.

## influxdb2

Proxmox is using UDP (Influx V1 compatible) Install Telegraf Socket listener plugin

[https://hub.docker.com/\\_/telegraf](https://hub.docker.com/_/telegraf)

```
echo "my_measurement,my_tag_key=my_tag_value value=1" | nc -u -4 -w 1  
docker-host 3522
```

## Grafana

Most dashboards are written to support Influx v1 (SQL like queries).
