

# TUN/TAP/PPP inside unprivileged LXC

```
lxc.mount.entry = /dev/net/tun dev/net/tun none bind,create=file  
lxc.mount.entry = /dev/ppp dev/ppp none bind,create=file
```

NOTE: PPP requires CAP\_NET\_ADMIN, and this is not possible to setup in unpriv container

Some hints:

```
# With this container fails  
#lxc.cap.keep: net_admin  
lxc.cgroup.devices.allow = c 108:0 rwm
```

```
# On PVE host!  
chown 100000:100000 /dev/ppp
```
